

POLL RESULTS

NAVIGATING RISK ADJUSTMENT HEADWINDS

Poll provides insight into how organizations are addressing Medicare Advantage plan risk adjustment.

1 IMPLEMENTING CHANGES NEEDED TO SUPPORT EDPS/RAPS

More than half of the respondents (60%) indicated that their organizations have hit at least the half way point when it comes to implementing the changes needed to support EDPS/RAPS. This level of involvement indicates that respondent organizations most likely realize that EDPS can have a significant impact on the bottom line and are looking to properly navigate the change to this new system.

2 DISCREPANCY BETWEEN RAPS AND EDPS SCORES

The great majority (69%) of respondents did not have knowledge of the status of the discrepancy between their organization’s RAPS and EDPS scores. Unfortunately, without knowing the difference between these two scores, it’s difficult for organizations to know exactly where they stand and exactly how big of a challenge it will be to support EDPS/RAPS.

3 PREDICTING THE FUTURE OF THE AFFORDABLE CARE ACT

Nearly 7 of 10 respondents (69%) predicted that the Affordable Care Act would be repealed but they have been proved wrong. The repeal made headlines virtually every day until its fate was decided recently with the collapse of the healthcare bill and ACA has now become the law of the land. Irrespective of the outcome, value-based care models such as Medicare Advantage appear likely to play a prominent role in the future – and there will most likely be time to adjust to shifting payment structures.
